

Dividing Numbers Formula

If you are using Designer 2.3 and Viewer 6.01 you will not be able to create a formula to divide numbers directly in the “Add Formula” dialog box. You will need to add the following code directly in **code view**.

Perform the following:

1. On IMT, select field that formula will be added to.
2. Right-click on field and select **Code View...Selected Items**.
3. After `</size>`, delete `<value></value>`.
4. Then type the following **EXACTLY** how it is shown changing field names to match the fields in your IMT:

```
<custom:set_Value xfdl:compute=" &#xA;
toggle(PAGE1.FIELD1.value) == '1' or toggle(PAGE1.FIELD2.value) == '1' &#xA;
? PAGE1.FIELD2.value != '0' &#xA;
  ? set('value', (PAGE1.FIELD1.value / PAGE1.FIELD2.value)) &#xA;
  : set('value', ' ') &#xA;
: ""></custom:set_Value>
```

5. Click **OK**.

NOTE: It is important that you remember to change the field names so that they match the fields in your IMT; otherwise the formula will not work properly.
